Bilingual Software Engineer passionate about Full Stack Development and promoting safety through the knowledge and software development best practices.

TECHNICAL SKILLS

- Frontend: JavaScript, jQuery, APIs, React, AJAX, HTML, CSS, SASS, and Bootstrap
- Backend: Node, Express, MySQL, MongoDB, Python, Handlebars, Firebase, RESTful, AWS, and Java

PROJECTS

Access Tennessee Role in Full Stack - Frontend UI/UX and Backend Node | [Link](#)

- Access Tennessee is an app that strives to make this state more accommodating and accessible to all people. By giving individuals the chance to rate and directly interact with businesses in the community about what accommodations are needed for specific types of impairments/ disabilities
- Implemented UI/UX design for Access Tennessee by using jQuery, basic JavaScript, and *Backend* with Handlebars and Node dependencies like Animate.css.
- Tools used by me for this project: JavaScript, jQuery, Node, Express, Heroku, HTML, CSS, and Bootstrap

Super Fan Role in Frontend | [Link](#)

- Super Fan is an interactive front-end project for music fans to search for their favorite lyrics and albums
- Implemented the UI/UX design for this project while researching APIs to be used for the search of songs, artists, and discographies.
- Tools used by me for this project: JavaScript, jQuery, APIs, HTML, CSS, and Bootstrap

Pizza Hunt Role in Backend | [Link](#)

- Pizza Hunt is a social networking recipe app that allows users to share their own pizza creations, leave comments on recipes, and develop threads within those comments
- Created this project just for myself in storing pizza menus, I used MongoDB, Mongoose, and RESTful to manage the database activities including Node and Express to develop this website.
- Tools used by me for this project: JavaScript, Node, Express, MongoDB, Mongoose, and RESTful

EXPERIENCE

Web Developer

Seven Women & Inspiring Humans Marketplace

Winter 2022
Remote – Australia

- Developed the *Inspiring Humans Marketplace* website: [Link](#)
